-- The IL-1 signal transduction cascade is analogous to a signaling cascade in Drosophila melanogaster that is involved in the establishment of dorsal ventral polarity during the early development of Drosophila embryos. Specifically, in Drosophila, the extracellular ligand Spaetzle binds to a receptor called Toll, which shares homology to IL-1R. In addition, a serine/threonine kinase acting downstream of Toll activation, Pelle is homologous to IRAK kinases (Cao, et al., Science 271:1128-1131 (1996); Muzio, et al., Science 278:1612-1615 (1997); Wesche, et al., J.
